## E-Fidelity operation

The E-Fidelity system is a system that allows you to manage:

1. Loyalty Cards
2. assigning a score against a sale
3. use of points for prizes or discount vouchers
4. management of micromarketing initiatives
5. Gift card Management

The service is available through two access points:

- **Web Service:** The services allow the management of the calculation of the scoring and redemption of prizes, coupons and gift cards, to be directly recalled during the sales process.
- **Web Area:** Operating and Management web area accessible in optimized mode for the sales operator and full mode for the loyalty card manager

## Limitations and Best practices

---

### Card codes

1. For the same card circuit, it is not possible to use card codes of different lengths.
2. It is recommended that you make the length of your card code configurable to E-Fidelity in your system

### Codes prizes, vouchers, coupons, Gift cards

All objects usable by end customer (prizes, coupons, gift cards, voucher purchases) are encoded within E-Fidelity with a 9-digit code (different code length is available).

E-Fidelity uses confidential codes and distributes the list of code directly from Web Service.

The codes within E-Fidelity can be reused for which you need to take into account the cancellation and variation records that are present within the update.

### Sales transmission

- During the sale it is mandatory to perform the validation of the sale through the method "CheckSale" then call "StoreSale".  
After the call to CheckSale the system returns the count in preview of the calculated points and any operations to be performed on the lines of the sale in order to apply promotions or to exploit coupons and vouchers. It is recommended that you show a visual preview to the user of what is happening to the sales data.
- It is recommended for statistical purposes to send all registered sales, even those that occurred without passing the card code. See the dedicated section for details.
- During online interaction with E-Fidelity It is recommended to provide a time-out system between Client and server (5 seconds recommended).  
In the event of a time-out it is advisable to continue with the offline sale and then retransmit the

data, only by invoking The StoreSale method, when the connection is available again. The points will be correctly calculated by the server.

If the connection is unavailable, you will not be Able to:

- Calculate in real time the score of the sale
  - Use coupons, vouchers, gift cards
  - Take advantage of offers reserved for cardholders
- 
- In exceptional cases it is possible to retransmit the same sale several times without worrying about generating a duplicate sale: E-Fidelity system checks the uniqueness of the receipt ID.
  - The system can rely on an external database to complete data coming from the ERP
  - In E-Fidelity, you can configure the sales line types on which to calculate the score. All lines whose sales type is not present among those enabled will not be used to calculate the score or the total of the receipt.

Examples of sales types enabled by default are:

- **L**(Free sale)
- **L**-(Return)
- **Lr**(Free sale, booked product withdrawal)
- **Ls**(Free sale, booked product activation). In the case of suspended sales, you must correctly manage the amounts sent to the server to avoid assigning twice the score.

### Customer base

- Data is centrally managed by E-Fidelity: All the modifications entered through the Web interface will be available for download by the ERP.
- There is no mechanism to upload via Web Service the customer data changes. The E-Fidelity system acts as a master, the ERP must function as a read-only slave and all modifications of the data managed by E-Fidelity must be directed directly on the Web page.
- It is advisable to always make available the access key to the customer card directly in the screens of interaction between user and customer data (customer card, sale at the bank)

## Access references

### Accessing the Web Service

---

The service descriptor (test environment) is available from the address

[http://test.efidelity.it/ws\\_loyalmanager/LoyalManagerService.svc?wsdl](http://test.efidelity.it/ws_loyalmanager/LoyalManagerService.svc?wsdl)

## Direct access Link to the Web area

---

The following link allows access to the E-Fidelity Web area by verifying the credentials entered in the string query parameters

**Example:**

<http://test.efidelity.it/L/LM.aspx?US=xxx&PW=xxx>

### Parameters accepted in the direct access link to the Web area

- **US** username (Required)
- **PW** password (Required)

## Direct Access Link to the customer card

---

The following link allows the Autologin with direct access to the functionality in "sale operator" mode. In this mode you will have direct access to the customer card in a page optimized for the embed in a WebView. There is no navigation menu on this page.

**It is advisable to insert a direct access button in your software from both the sales screen and the customer data screen.**

**example:**

[http://test.efidelity.it/L/IN.aspx?US=xxx&PW=xxx&CC=00000002&PO=COD\\_POSTAZIONE&OP=COD\\_OPERATORATORE](http://test.efidelity.it/L/IN.aspx?US=xxx&PW=xxx&CC=00000002&PO=COD_POSTAZIONE&OP=COD_OPERATORATORE)

### Parameters accepted in direct access links to features

- **US** username (mandatory)
- **PW** password (mandatory)
- **CC** card code (optional)
- **PO** station (optional)
- **OP** operator (optional)
- **PR** reward code to book (optional)
- **CL** user identification code (optional)
- **VL** Euro value of the Gift Card to be created (optional)

For direct access to functions use the **TG** parameter

- Supported Code types:
  - **TG=7** : Card activation, in the case of a card not active (passed in the **CC** parameter) The system opens the page containing the data entry form of the customer.

Other optional parameters: operator code (**OP**) and station code (**PO**), which created the card activated.

- **TG=8** : Direct access to the premium booking page, together with the TG parameter, value the information related to the Card code (parameter **CC**) and Code of the prize (parameter **PR**).

Other optional parameters: operator code (**OP**) and station code (**PO**)

- **TG=10** : opens the GIFT CARD management page where the user can create or activate a gift card. It's possible to pre-set the gift card value via the VL parameter (e.g. VL=10 initializes the Gift Card with a value of 10 €)  
**Attention!** It's mandatory to set a card code when opening the URL (e.g. CC=999999999 or CC=customercardcode)

Other parameters are optional: operator code (**OP**) and station code (**PO**) will be saved as the station and the operator that has activated the Gift Card

- **TG=11** : virtual card activation. The system searches the first non-active card and redirects the user to the activation form

Other parameters are optional: operator code (**OP**) and station code (**PO**) will be saved as the station and the operator that has activated the card

## Interaction via Web Service

### General Information

---

There are 4 points of communication between the management and LoyalManager during the sales process.

1. Start Sale/user identification  
**CheckUser(ClientInfo): CodaOperazioni**
2. Presale  
**CheckSale(ClientInfo, Scontrino) : CodaOperazioni**
3. Closing Sale  
**StoreSale(ClientInfo, Scontrino) : CodaOperazioni**
4. Sales independent Operation Queue Manager [optional]  
**GetCodaUtilita(ClientInfo) : CodaOperazioni**

#### Other methods:

1. **RicercaCard(String Username, String Password, String ValoreRicerca, Int32 TipoRicerca)**
2. **CouponByCards(ClientInfo) : Coupons**
3. **RewardsByCards(ClientInfo): Premi**

### CheckUser

This operation allows the ERP to be connected to a customer through card code or fiscal code for the active cards.

The card activation procedure is activated when the CheckUser is running on a non-active card. The user is redirected to the activation page and invited to fill out the form with the customer's personal data.

### CheckSale

The CheckSale operation is performed after the insertion of all the products for sale. In the CheckSale phase you have the valorisation of the sales score, application of discounts deriving from coupons/vouchers/Gift cards or offers for cardholders, accumulation of any additional points. In the case of prize withdrawal, the CheckSale displays a sales score value of zero and enhances the receipt with any contribution to be paid.

The operation returns summary sales data with scoring and total sales data. At this stage you can still change the products for sale.

CheckSale is always called for customers with cards, optionally (can be activated by ERP) for sales of customers no card.

### StoreSale

The StoreSale represents the operation of closing the sale that does nothing but confirm and save the data relating to the receipt calculated in the CheckSale phase.

### GetCodaUtilita

The method allows you to download the information contained in the queue of operations in moments not related to the sale and card pass from management.

In the "ClientInfo" input object, in the "codename" property, you can use the special card code "NO card" that corresponds to code **999999999**.

To enable the system to manage this queue's data download mode, you must configure a parameter in the BackOffice area of E-Fidelity.

The parameter is in the section:

*Config > category: Selling > Set the parameter to 1 "load independent queue from sales"*

To date only the update of the prizes and coupon database is available.

### RicercaCard

The method searches for the card data based on the search criteria passed as a parameter.

The parameters of "ValoreRicerca" and "TipoRicerca" should be set with the data in the table:

|                       | ValoreRicerca          | TipoRicerca |
|-----------------------|------------------------|-------------|
| Search by health code | Customer's health code | 1           |

The method returns an operations queue with an "AggiornamentoAnagrafica" object containing the list of resulting search data.

In case of card data not found, the queue is returned with a problem type operation.

### CouponByCards

The method searches the list of coupons usable by the customer. The method takes input from a Client Info object and returns a list of coupons that the customer can use.

### RewardsByCards

The method searches the list of prizes that the customer can request based on his/her balance points. The method takes input from a Client Info object and returns a list of prizes that the customer can use.

## Transmission of sales data without a card

---

For statistical purposes it is advisable to transmit to the Web Service of E-Fidelity all registered sales, even those not associated with any card code.

To send the sales without card you can use a special card code "NO CARD" that has associated a special code composed of all 9.

NO CARD code: 999999999

Typically, the length of the NO CARD code saved inside E-Fidelity is 9 digits even if the card circuit uses a different card code length, excluding prefix.

If it is not possible to send a NO card code of a length other than that of the other cards, it is necessary to request the administrators of E-Fidelity to vary the NO card code.

## Input parameters

Each interaction with the system consists of 2 parts:

1. Authentication part: Performed by ClientInfo object
1. Part of data: carried out by the Scontrino object

### Request authentication parameters [ClientInfo]

Object that contains all the information about the client that is interacting with the server.

| Parameter Name         | Description  | Type     | Required |
|------------------------|--|----------|----------|
| <b>Username</b>        | Service Access Username  | String   | Yes      |
| <b>Password</b>        | Access Password to the service   | String   | Yes      |
| <b>IdPuntoVendita</b>  | Store Id. Unique within the system   | String   | No       |
| <b>CodiceCassa</b>     | Cash ID. Unique within the store   | String   | No       |
| <b>DataOra</b>         | Date/time of operation format YYYY-MM-dd hh:mm:ss  | DateTime | Yes      |
| <b>CodiceOperatore</b> | Operator performing the operation  | String   | No       |
| <b>CodiceCarta</b>     | Loyalty Card Code  | String   | Yes      |
| <b>IdCliente</b>       | Customer ID (for use as an alternative to the card code)   | String   | No       |
| <b>Ritrasmissione</b>  | Value that indicates whether the receipt has already been entered (retransmit value "1") or not (retransmit value "0") | Int      | No       |

### Sale Data [Scontrino]

General data of the sale

| Parameter Name           | Description  | Type            | Required |
|--------------------------|--|-----------------|----------|
| <b>IdScontrino</b>       | Unique identifier of the sale inside the shop.   | String          | No       |
| <b>LordoScontrino</b>    | Total of the sale before the discount  | Decimal         | Yes      |
| <b>ScontoRigaVendita</b> | Sum of total discount applied on sales lines   | Decimal         | Yes      |
| <b>ScontoScontrino</b>   | Any discount applied on the total of the sale  | Decimal         | Yes      |
| <b>NettoScontrino</b>    | Total of the sale net of any discount applied on the total and sales lines (amount paid by the customer) | Decimal         | Yes      |
| <b>RigheScontrino</b>    | List containing the sale lines   | RigaScontrino[] | Yes      |
| <b>PuntiBonusMalus</b>   | Number of whole points to sum/subtract to customer points balance  | Int             | No       |

## Sale Lines [RigaScontrino]

| Parameter Name               | Description  | Type    | Required |
|------------------------------|--|---------|----------|
| <b>NumeroRiga</b>            | Sequence number of the sale line   | Int     | Yes      |
| <b>CodiceProdotto</b>        | Product Code   | String  | Yes      |
| <b>NomeProdotto</b>          | Product Name   | String  | No       |
| <b>LordoArticolo</b>         | Total selling price gross of any discounts   | Decimal | Yes      |
| <b>ScontoArticolo</b>        | Amount of any discount applied on the line   | Decimal | Yes      |
| <b>NettoArticolo</b>         | Total sales price net of any discount (amount actually paid by the customer)   | Decimal | Yes      |
| <b>Quantita</b>              | Quantity   | Int     | Yes      |
| <b>DittaProduttrice</b>      | Manufacturer's Code (code that identifies the producer)  | String  | No       |
| <b>Categoria1</b>            | Product Category 1   | String  | No       |
| <b>Categoria2</b>            | Product Category 2   | String  | No       |
| <b>Categoria3</b>            | Product Category 3   | String  | No       |
| <b>TipoProdotto</b>          | Product Type   | String  | Yes      |
| <b>QuotaCliente</b>          | Amount paid by the patient in the case of drugs  | String  | No       |
| <b>TipoRigaVendita</b>       | <p>Type of sale</p> <p><b>Attention!</b> The system may impose restrictions on the types of sales enabled for points accumulation and bids.</p> <p>The types of sales enabled by default are:</p> <ul style="list-style-type: none"> <li>- <b>L</b>: Free Sale</li> <li>- <b>L-</b>: Return of a product</li> <li>- <b>Lr</b>: Free sale, booked product withdrawal</li> <li>- <b>Ls</b>: FREE sale, booked product activation</li> </ul> <p>The default-enabled sales types for offers are:</p> <ul style="list-style-type: none"> <li>- <b>L</b>: Free Sale</li> </ul> <p>The types of sales enabled can be configured in the E-Fidelity platform.</p> | String  | Yes      |
| <b>Raggruppamento</b>        | Group of rows (number of the prescription in case of drugs)  | String  | No       |
| <b>InOfferta</b>             | <p>1: Indicates whether the product on the line has already been applied an offer</p> <p>0: Indicates that no offer has been applied to the product</p>  | Int     | Yes      |
| <b>TipoPrezzoAlternativo</b> | Typology of any alternative price applied to the product   | String  | Yes      |

## Output: Operations Queue

For each call made by the management at LoyalManager, LM responds with a queue of operations. The operations queue is a list of proposed or mandatory operations (both software-type and "human" that the client must perform)

If the operation is blocking (i.e. the operation is mandatory and requires user intervention), after the operation (ed. Closing the browser), the management remakes the same call to the system. If the operation was done correctly, it will no longer be in the operations queue.

Examples of operations:

| Use case  | Condition   | What happens on ERP   | Content response | Operation Type                        | Blocking |
|---|---|---|------------------|---------------------------------------|----------|
| <b>Card Not activated</b>   | The card is valid and exists in the system but has never been activated   | Opens browser window with optimized page.   |                  | ApriUrl                               | Yes      |
| <b>Remind the client that...</b>                                  |   | Pop-up or window that shows the user a simple text  |                  | MostraTesto                           |          |
| <b>Coupon print on the receipt</b>                                | The customer is entitled to a one-to-one coupon   | The coupon is sent to print   | BMP/JPEG         | StampaScontrino                       |          |
| <b>The customer has a coupon to use</b>                           |   | The ERP proposes to the operator to ask the user if the customer wants to use the coupon                        |                  | MostraTesto / ApriUrl                 |          |
| <b>Give a pre-printed coupon to the customer -TO Activate</b>     |   | Open Web page where it is said to activate and deliver a pre-printed coupon to the customer.                    |                  | ApriUrl                               | Yes      |
| <b>Give a pre-printed coupon to the customer – already active</b> |   | Pop-up or window that tells the user to deliver a pre-printed coupon to the customer.                           |                  | MostraTesto                           |          |
| <b>Ask some questions to the customer</b>                         |   | Web page with a questionnaire to fill out   |                  | ApriUrl                               |          |
| <b>Customer must withdraw a prize</b>                             |   | Pop-up or window that shows the user a simple text.   |                  | MostraTesto                           |          |
| <b>Problem with the E-Fidelity application</b>                    | The E-Fidelity system detects that there is a problem with the data passed (card not active during the sale, multiple prizes withdrawal...) | The ERP must show the warning message and exit the function, to give the user the opportunity to edit the sale. |                  | Problema                              |          |
| <b>Edit Sale</b>  |   | Apply discounts or coupons to the sale.   |                  | ModificaScontrino                     |          |
| <b>Update user Data</b>   |   | Updates the data from the Web application.  |                  | Aggiornaanagrafica                    |          |
| <b>System error</b>   | The e-Fidelity system detects that there is a system error (internal error, login error...)   | Perform error notification operations   |                  | Error                                 |          |
| <b>Balance points</b>   | The ERP wants to know the   | Show data within the sale screen  |                  | InfoUtente (object always returned to |          |

customer's points  
balance

every interaction  
with System)

### Queue of operations to perform [CodaOperazioni]

The operations queue always includes the customer information and a non-pre-defined length queue of operations to perform.

| Parameter name    | Description                | Type         |
|-------------------|----------------------------|--------------|
| <b>InfoUtente</b> | Loyalty Card Customer Data | InfoUtente   |
| <b>Operazioni</b> | Queue of operations to run | Operazione[] |

### Operations [Operazioni]

| Parameter Name                       | Description   | Type                      | Mandatory |
|--------------------------------------|---|---------------------------|-----------|
| <b>IdOperazione</b>                  | Operation Id  | Int                       | Yes       |
| <b>IdCliente</b>                     | The Id of the customer that is referenced by the operation to be executed   | Int                       | Yes       |
| <b>NomeOperazione</b>                | The name of the operation to perform  | String                    | Yes       |
| <b>TipoOperazione</b>                | The type of operation to perform in text format. Depending on the type of operation present some objects of the operation will be valued, other null. See the legend for details                | String                    | Yes       |
| <b>OrdineOperazione</b>              | Order of operations to be carried out   | Int                       | Yes       |
| <b>Bloccante</b>                     | Indicates whether the operation should be blocking for the Client. After completing the blocking operation, you must make the same call to the system to receive an updated queue of operations | Boolean                   | Yes       |
| <b>Allegato</b>                      | File attached to the operation  | Attachment                | No        |
| <b>Url</b>                           | Absolute address of a Web page including http://  | String                    | No        |
| <b>Testo</b>                         |   | String                    | No        |
| <b>TestoHtml</b>                     |   | String                    | No        |
| <b>ModificheScontrino</b>            |   | ModificaScontrino[]       | No        |
| <b>AggiornamentoAnagraficaElenco</b> |   | AggiornamentoAnagrafica[] | No        |
| <b>StornoGiacenza</b>                |   | StornoGiacenza            | No        |
| <b>SostituzioneCard</b>              |   | SostituzioneCard          | No        |

## Operation Types [TipoOperazione]

| Operation Type                | Description  | Objects used                 | User interaction |
|-------------------------------|--|------------------------------|------------------|
| <b>ApriUrl</b>                | The system must open a browser to view the URL in the dedicated object   | Url                          | Yes              |
| <b>ModificaScontrino</b>      | The system must change the sales lines according to the rules sent   | ModificheScontrino           | No               |
| <b>MostraTesto</b>            | The system must show a popup or similar window that requires user confirmation   | Testo o TestoHtml            | Yes              |
| <b>VisualizzaMessaggio</b>    | The system displays an informational message in a dedicated area without requiring user confirmations.   | TestoHtml                    | Optional         |
| <b>StampaScontrino</b>        | The system must print on the receipt the image in the Annex  | Allegato                     | No               |
| <b>StampaContenuto</b>        | The system prints on the default printer (if any) the content  | Testo o TestoHtml o Allegato | No               |
| <b>AggiornaAnagrafica</b>     | The system must update the customer's personal data  | AggiornamentoAnagrafica      | No               |
| <b>SostituzioneCard</b>       | The system informs the ERP that an old card code has been replaced with a new  | SostituzioneCard             | No               |
| <b>Problema</b>               | The system must show details on the problem and interrupt the operation it is performing to give the operator the means to apply corrective actions  | Testo o TestoHtml            | Yes              |
| <b>ErroreSistema</b>          | Notification of system failure   | Testo o TestoHtml            | Yes              |
| <b>AggiornamentoBancaDati</b> | The system receives the attachment of the database's export file. The name of the returned file is fixed: AGGBD.seq  | Allegato                     | No               |
| <b>AttivaCard</b>             | The system must open the URL in the given object to enable the card to be activated.<br>Before opening the URL the system must ask for confirmation of the aperture showing the text in the field "text". If the user does not confirm the system does not | Testo e Url                  | Yes              |

|                       |  |                |    |
|-----------------------|--|----------------|----|
|                       | have to "hook" the card number to the sale   |                |    |
| <b>StornoGiacenza</b> | The system must update the inventory of the product contained in the item<br>StornoGiacenza  | StornoGiacenza | No |
| <b>DatiCoupon</b>     | The system returns all data about the coupon to be issued.<br>Data can be used for generating a graphics file or can be used with printers that do not support the graphics format | DatiCoupon     | No |

## Attachment [Allegato]

| Parameter Name         | Description                     | Type   |
|------------------------|---------------------------------|--------|
| <b>NomeFile</b>        | Original file name              | String |
| <b>DescrizioneFile</b> | Textual description of the file | String |
| <b>FileAllegato</b>    | Attached File                   | Byte[] |
| <b>MimeType</b>        | MIME type of the image          | String |
| <b>Dimensione</b>      | File size in bytes              | int    |

## Sale change [ModificaScontrino]

| Parameter Name               | Description  | Type                  |
|------------------------------|--|-----------------------|
| <b>TipoModifica</b>          | Type of change to make (Edit/insert/delete)  | String                |
| <b>RigaScontrinoModifica</b> | Line of sale to be processed. In the case of modification, the system returns a line similar to that passed in input with the price/discount/quantity values appropriately modified. | RigaScontrinoModifica |

## Sale line change [RigaScontrinoModifica]

| Parameter Name          | Description   | Type    |
|-------------------------|---|---------|
| <b>NumeroRiga</b>       | Sequence number of sale line  | Int     |
| <b>CodiceProdotto</b>   | Product code  | String  |
| <b>NomeProdotto</b>     | Product name  | String  |
| <b>LordoArticolo</b>    | Unit sales price gross of any discounts                                     | Decimal |
| <b>ScontoArticolo</b>   | Amount of any discount applied on the line                                  | Decimal |
| <b>NettoArticolo</b>    | Unit sales price net of any discount (amount actually paid by the customer) | Decimal |
| <b>Quantita</b>         | Quantity  | Int     |
| <b>DittaProduttrice</b> | Manufacturer's Code   | String  |
| <b>Categoria1</b>       | Value identical to the Categoria1 value received in input                   | String  |
| <b>Categoria2</b>       | Value identical to the Categoria2 value received in input                   | String  |
| <b>Categoria3</b>       | Value identical to the Categoria3 value received in input                   | String  |

|                              |   |        |
|------------------------------|---|--------|
| <b>TipoProdotto</b>          | Product Type  | String |
| <b>QuotaCliente</b>          | Customer fee  | String |
| <b>TipoRigaVendita</b>       | Sales Type Code   | String |
| <b>Raggruppamento</b>        | Group of rows (example medications prescribed in the same recipe)   | String |
| <b>InOfferta</b>             | 1: Indicates whether the product offer has already been applied<br>0: Indicates that no offer has been applied to the product | Int    |
| <b>TipoPrezzoAlternativo</b> | Typology of any alternative price applied to the product  | String |

## User Info [InfoUtente]

| Parameter Name                   | Description   | Type   |
|----------------------------------|---|--------|
| <b>IdUtente</b>                  | System-Assigned User Id   | String |
| <b>CodiceCarta</b>               | User's Fidelity Card code   | String |
| <b>SaldoPuntiAttuale</b>         | Current campaign balance points   | int    |
| <b>PuntiAggiuntiviVendita</b>    | Extra points earned in the sale   | int    |
| <b>PuntiVendita</b>              | Points earned in the sale   | int    |
| <b>SaldoPuntiNuovo</b>           | New points balance  | int    |
| <b>CodiceErrore</b>              | Error code  | Int    |
| <b>DescrizioneErrore</b>         | Error description   | String |
| <b>DescrizioneCliente</b>        | Customer's surname and name   | String |
| <b>PuntiBonusMalus</b>           | Value of bonus/malus bonus points entered   | int    |
| <b>SaldoPuntiVecchiaCampagna</b> | Balance points accumulated in the old campaign still usable to redeem prizes of the old campaign. The field is valued only in case there is a balance for usable points accumulated during the old campaign. Usually after the expiration of a campaign there is a period in which the customer accumulates the points for the new campaign but can still use the old balance to redeem prizes. In case the value of the field is -1, it means that the campaign points balance is not available, so it is not necessary to manage the double information new/old balance | Int    |

## User data update [AggiornamentoAnagrafica]

| Parameter Name                   | Description                                 | Type       |
|----------------------------------|---|------------|
| <b>IdAggiornamentoAnagrafica</b> | User data update identification             | Int        |
| <b>IdAnagrafica</b>              | Identification of the user to be modified   | Int        |
| <b>TipoModifica</b>              | Type of change to make (Edit/insert/delete) | String     |
| <b>Anagrafica</b>                | User Data                                   | Anagrafica |

## User Data [Anagrafica]

| Field name | Value | Type | Length |
|------------|-------|------|--------|
|------------|-------|------|--------|

|                           |   |        |    |
|---------------------------|---|--------|----|
| <b>IdAnagrafica</b>       | Unique Id of system-assigned user data                      | Int    |    |
| <b>CodiceCarta</b>        | Loyalty Card Code   | String |    |
| <b>CodiceFiscale</b>      | Customer tax code   | String |    |
| <b>Nome</b>               | Name  | String |    |
| <b>Cognome</b>            | Surname   | String |    |
| <b>DataNascita</b>        | Date of birth in yyyy-MM-DD format                          | String | 10 |
| <b>Sesso</b>              | Sex   | String | 1  |
| <b>Indirizzo</b>          | Address   | String |    |
| <b>Cap</b>                | Postal Code   | String |    |
| <b>Localita</b>           | City  | String |    |
| <b>Provincia</b>          | Province  | String |    |
| <b>Telefono</b>           | Telephone   | String |    |
| <b>Cellulare</b>          | Mobile Phone  | String |    |
| <b>Email</b>              | Email   | String |    |
| <b>StatoAnagrafica</b>    | State of user data (active/inactive/...)                    | String |    |
| <b>DataUltimaModifica</b> | Date of last modification made on data in YYYY-MM-DD format | String | 10 |
| <b>Partitalva</b>         | Customer VAT Code   | String | 11 |

N.B.: As regards the deactivation of the card, the card must be dropped from the customer on the ERP when the Data status is "deactivated"

## Card substitution [SostituzioneCard]

| Parameter Name           | Description                         | Type   |
|--------------------------|-------------------------------------|--------|
| <b>CodiceNuovaCard</b>   | Code of the new card being replaced | String |
| <b>CodiceVecchiaCard</b> | Card Code replaced                  | String |

## Coupon Data [DatiCoupon]

| Parameter Name            | Description  | Type                        |
|---------------------------|--|-----------------------------|
| <b>CodiceCoupon</b>       | Coupon code to be used during redemption of the discount   | String                      |
| <b>Slogan</b>             | Slogan associated with Coupon  | String                      |
| <b>Avvertenze</b>         | Information in textual format on the use of the coupon (e.g. coupon only valid on cosmetics)   | String                      |
| <b>DataInizioValidita</b> | Date of validity of the coupon. From this date onwards you can use the coupon code   | String in mm/dd/YYYY format |
| <b>DataFineValidita</b>   | End date of validity of the coupon. Up to this date including you can use coupon code  | String in mm/dd/YYYY format |
| <b>Tipologia</b>          | Coupon Type:<br>0: Coupon entitles you to a discount in%<br>1: Coupon entitles you to a value discount<br>2: Informative coupon. This type of coupon does not entitle you to any advantage | Int                         |

|                             |  |         |
|-----------------------------|--|---------|
|                             | 3: Coupon entitles you to a multi-valued discount.<br>For example, €20 discount every €50 spending.  |         |
| <b>Valore</b>               | Value of the discount to which the coupon entitles;<br>The value is to be treated in different ways according to the coupon type.<br><ol style="list-style-type: none"> <li>1. Type 0: The figure indicates the percentage of discount (e.g. 20% discount)</li> <li>2. Type 1: The figure indicates the absolute value of the discount (e.g. €20.44 discount)</li> <li>3. Type 2: In case of information coupon the value will always be at 0 as this type of coupon does not entitle you to economic advantages</li> <li>4. Type 4: The figure indicates the value of the discount to be multiplied to the number of times the total of the receipt exceeds the value of the maximum amount. For example, the advantage to which the coupon entitles is "€2 discount every €10 spending." In this case the response of the message will be valued: <ol style="list-style-type: none"> <li>1. Type: 4</li> <li>2. Value: 2.00</li> <li>3. Sogliascontomultiplo: 10.00</li> </ol> </li> </ol> | Decimal |
| <b>SogliaScontoMultiplo</b> | Only applicable in the case of type 4 coupons.<br>Indicates every how many euros of spending the discount is applied.  | Decimal |
| <b>ImportoMinimo</b>        | Minimum amount for which the coupon can be used for sale   | Decimal |
| <b>BeneficiarioCard</b>     | In case the data is present it indicates the card code of the customer to whom the coupon is destined. In case the data is not present the coupon is to the bearer.  | String  |
| <b>BeneficiarioNome</b>     | In case the data is present it indicates the name of the customer to whom the coupon is intended. In case the data is not present the coupon is to the bearer.   | String  |
| <b>BeneficiarioCognome</b>  | In case the data is present indicates the surname of the customer to whom the coupon is intended. In case the data is not present the coupon is to the bearer.   | String  |

## Rewards [Premi]

| Parameter Name               | Description   | Type       |
|------------------------------|---|------------|
| <b>Errore</b>                | Error description<br>(User not found, Credentials error...) | String     |
| <b>Info</b>                  | Object that reports the user information                    | InfoUtente |
| <b>ElencoPremiRitirabili</b> | List of prizes the user can collect                         | Premio[]   |

## Reward [Premio]

| Parameter Name            | Description  | Type    |
|---------------------------|--|---------|
| <b>Nome</b>               | Prize description  | String  |
| <b>PuntiConContributo</b> | Points needed to book the prize in case of paid contribution                                       | Int     |
| <b>Punti</b>              | Score needed to book the prize   | Int     |
| <b>Contributo</b>         | Financial contribution to withdraw the prize   | Decimal |
| <b>CodicePremio</b>       | Unique prize code  | String  |
| <b>ValoreBuono</b>        | Discount value associated with prize voucher   | Decimal |
| <b>Prenotazione</b>       | Indicates whether the prize is withdrawable with reservation (true) or without reservation (false) | Boolean |
| <b>CampagnaPremi</b>      | Name of the campaign to which the prize refers   | String  |

## Coupons

| Parameter Name            | Description   | Type       |
|---------------------------|---|------------|
| <b>Errore</b>             | Error description<br>(User not found, Credentials error...) | String     |
| <b>Info</b>               | Object that reports the user information                    | InfoUtente |
| <b>ElencoCouponAttivi</b> | List of coupons that can be used by the customer            | Coupon[]   |

## Coupon

| Parameter Name             | Description  | Type   |
|----------------------------|--|--------|
| <b>Codice</b>              | Coupon Code  | String |
| <b>DataFineValidita</b>    | End date of coupon validity                        | String |
| <b>DataInizioValidita</b>  | Start date of coupon validity                      | String |
| <b>DescrizioneUtilizzo</b> | Description on discount application rules          | String |
| <b>Slogan</b>              | Slogan associated with coupon                      | String |
| <b>Titolo</b>              | Title of the initiative associated with the coupon | String |

## InfoUtente Error Codes

Below is the list of error codes that the application can answer in case of anomalies:

| Code | Description                              |
|------|--|
| 0    | No Error                                 |
| 1    | Access Denied                            |
| 99   | Internal Error                           |
| 100  | No Error                                 |
| 101  | Incorrect Header Attributes              |
| 102  | Mandatory Header Parameters not complete |

|     |  |
|-----|--|
| 103 | Customer not found   |
| 104 | Sales ID or non-unique receipt Id  |
| 105 | Error in one of the receipt lines  |
| 106 | Customer Inactive  |
| 107 | Circuit not existing   |
| 108 | No Formula defined for this circuit  |
| 109 | Pharmacy not assigned to any circuit   |
| 110 | No active campaign for this circuit  |
| 111 | Error. You are withdrawing a prize with a different contribution value than the booking.   |
| 112 | Error. Use only a voucher purchase and a Coupon in the same sale.  |
| 113 | Error. Use only a good buy in a sale.  |
| 114 | Error. Use only a Coupon in a sale.  |
| 115 | Attention: It is not possible to include a voucher and a Gift Card in the same sale. Make two separate sales.  |
| 116 | Error. Use only a Gift Card in a sale.   |
| 117 | Error. No products for sale have been included. The object of the initiative is not applicable.  |
| 198 | Invalid operation  |
| 199 | Internal Error   |
| 200 | No error   |
| 201 | Wrong row attributes   |
| 202 | Incomplete Required Row parameters   |
| 203 | Non-matching contribution value  |
| 204 | Not enough points for prize withdrawal   |
| 205 | Non-Withdrawable prize (Master card)   |
| 206 | Could not continue. Book or withdraw a prize by putting in the sale the only prize   |
| 207 | attention!! Not enough points to withdraw the prize without a contribution. The customer has the balance necessary for the withdrawal with contribution. Change the amount with the value of the contribution and continue |
| 217 | It is no longer possible to book a prize of the campaign Passed\n points have expired  |
| 218 | The selected prize is no longer present in the catalogue. Could not continue.  |
| 219 | Error. Reservation/withdrawal of a prize only to the cards activated in pharmacy! Could not continue.  |
| 299 | Internal Error   |
| 301 | Wrong attributes   |
| 302 | File error   |
| 401 | Coupon Usable in future date   |
| 402 | Coupon Expired   |
| 403 | Coupon not usable by customer  |
| 404 | Coupon already used  |
| 405 | Coupon does not check the conditions of applicability per the products for sale  |
| 406 | Coupon not applicable. Minimum amount of expenditure not reached   |
| 407 | Coupon not applicable to any product for sale.   |
| 408 | Gift card with exhausted residue. Remove for sale.   |
| 409 | Gift card not active.  |

|     |   |
|-----|---|
| 410 | Voucher/non-withdrawable prize from a customer without a card.  |
| 411 | Voucher/non- withdrawable prize. Insufficient points balance.   |
| 413 | Good non-withdrawable. The voucher is no longer present in the catalogue.   |
| 414 | Not usable by a customer of another pharmacy.   |
| 415 | Coupon with multi-value discount not applicable. Not reached the threshold that allows the definition of the discount |

## Product Management in the database

Products subject to Marketing activities, prizes or vouchers are placed in a file with a particular record format. The ERP must deal with decoding the file and saving the rewards as products of its own database. The coding takes place on free product codes (to be verified according to the market)

The products interested in the coding operation are:

- Prizes (Grouping code 7003)
- Voucher Purchase (code grouping 7002)
- Gift Card (code grouping 7004)
- Coupon (code grouping 7002)

The download of the product list file takes place on the occasion of:

- Create/Edit a prize
- Creating/Modifying a voucher
- Create/Edit a Gift Card
- Create/Edit a Coupon
- Forcing download database from Web platform

At the first useful operation (e.g. CheckUser or CheckSale) efidelity makes the list of codes available to the ERP.

## Coupon Support with free codes

Normally the coupons are encoded within the application as confidential product codes. The code is automatically attributed to the coupons created and distributed through the database update.

However, you can also use free coupon code that is not encoded as product codes but as alphanumeric strings of up to 25 digits.

### Coding Free Coupon Codes

---

Free coupon codes are alphanumeric strings encoded as follows:

#### **2-DIGIT ALPHABETICAL PREFIX + INTEGER**

Valid examples of codes are:

EF1234FR123383483483489AA37237237

The prefix is parametric. An installation can only use a coupon prefix.

## How to transmit the code

---

In the CheckSale and StoreSale phase it is not possible to send the free coupon code as the product code but it is necessary to send in the path the fictitious product code 888888888 (9 times the number 8 or other product code) and enter in the name of the product the item "COUPON **XXXXX**" replacing in place of **XXXXX** the coupon code free.

### Workflow Example

1. The customer wants to redeem the coupon EF000123 which entitles you to €5 discount
2. The Pharmacist reads the customer card code
3. The pharmacist adds the coupon code EF000123 in the ERP sale window
4. The ERP recognizes the coupon prefix EF and adds the coupon in the sale lines as a product with these characteristics:
  - Product Code: 888888888
  - Name: COUPON EF000123
  - Quantity: 1
  - Price: 0
  - Degrassi code: 7002
5. The ERP makes the CheckSale call with sale data
6. Efidely, if the coupon is valid, answers with a ModificaScontrino operation to set the price of the coupon (e.g. -5€).

### Limitations

---

You can enter only one free coupon code per sale. In case there are multiple more sale lines with the same code the Web Service responds error.

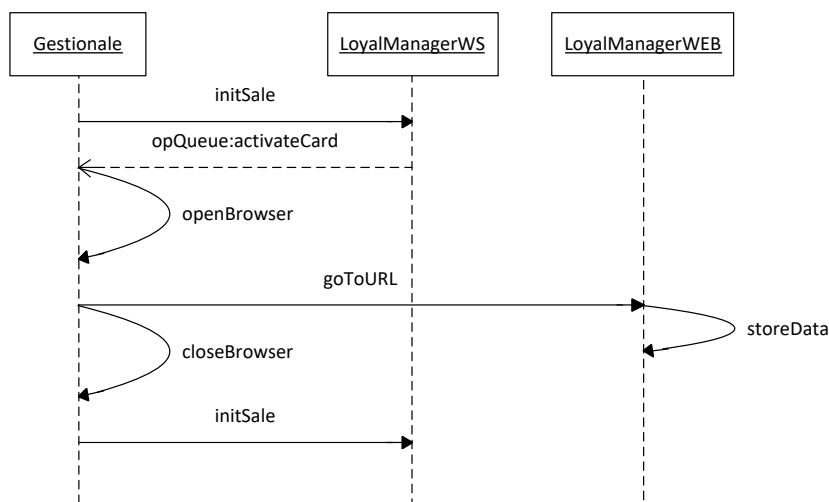

## Use cases

### New card

#### What happens on ERP:

1. The operator reads the new loyalty card – The ERP recognizes that the barcode bed is a card code and calls the service. The cards must have already been inserted into the system and are in a **non-active** State.
2. The service recognizes that the number is valid and that the loyalty card is not active. Responds to the ERP with the blocking operation goToURL with the address of the activation page.
3. The ERP opens in the browser the Web page indicated. The operator inserts the necessary fields for the activation of the paper and confirms.
4. After the web page has been closed, the ERP invokes the service to check that the activation has been successful. If the activation has been successful in the queue there will be a series of operations including the **AggiornaAnagrafica** that will contain all the customer's details. Otherwise the service responds again with the goToURL operation for activation.

## Use cases: COUPONS

### Coupon emission on receipt

---

#### What happens on ERP:

1. The operator reads the loyalty card and inserts some lines in the sale.
2. In the pre-sale phase, the ERP passes the lines to Efidely.
3. The service returns to the ERP a JPEG or the text already formatted for printing on the receipt.
4. The ERP sends the coupon (text or JPEG) to the printer.

### Premade Coupon Emission (coupon to be activated)

---

#### What happens on ERP:

1. The operator reads the loyalty card and inserts some lines in the sale.
2. In the pre-sale phase, the ERP passes the lines to Efidely.
3. The service returns a text to the pharmacist inviting him to give the customer a pre-printed coupon.  
The coupon must be activated, and the operator is sent to the sales screen.
4. The operator takes the coupon and places it in the sale
5. The service enables the coupon to the customer in the subject.

### Premade Coupon Emission (active coupon)

---

#### What happens on ERP:

1. The operator reads the loyalty card and inserts some lines in the sale.
2. In the pre-sale phase, the ERP passes the lines to Efidely.
3. The service returns a text to the pharmacist inviting him to give the customer a pre-printed coupon.
4. The coupon is already active and no activity is required

### Redeem Coupon

---

#### What happens on the ERP:

1. The operator reads the loyalty card number and adds some products to the sale.
2. The operator reads the Coupon and inserts it as a line of the sale
3. The sale is sent to LM with CheckSale call
4. LoyalManager checks the validity of the coupon.
  1. If VALID: LM returns the rows of the receipt to be edited
  2. If NOT VALID: LM Returns an error condition with the reason why the coupon is not valid.  
The operator must remove the coupon from the sale in order to continue.  
(**Alternative:** The system could return to the system a queue of operations that forces the system to remove the coupon from the lines of the receipt and to notify the customer problem)

## Use case: PRIZES

### Reservation/Prize withdrawal

---

The withdrawal phases of a prize are normally 2:

1. Booking the prize
2. Withdrawal of the prize

The two phases can take place simultaneously (e.g. product already present in the pharmacy).

The booking phase takes place via browser from the customer's card and results in the printing of a "booking voucher".

The withdrawal phase is done through the sale on the ERP. In case of sale on the ERP without reservation, the system assumes that the prize has been reserved and withdrawn at the same time.

#### Prize withdrawal: what happens on the ERP:

1. The operator reads the loyalty card
2. The operator places on sale the code of the reserved prize.
3. The prize code is sent to LM
4. LoyalManager checks the correctness of the operation (prize code, customer points, contribution etc...)
5. LM modifies the track of the receipt indicating any contribution to be paid.
6. The ERP Prints the receipt and delivers the prize.

#### Problem unloading inventory stock (in the case of products already sold inside the store):

Solution 1: LM receives the prize code. LM Activates all the controls and modify the track of the receipt by returning to the management the correct code with the correct price for issuing the receipt and unloading the stock (suggested)

## Special cases:

### Product returned:

---

In the sale is passed the product with negative amount. The system provides the recalculation of points.

### Products booked:

---

In case of products booked, the crediting of the points will be at the withdrawal of the product (even in case of partial advance by the customer)

## Miscellaneous

### Barcode coding

---

Coupons can start with a prefix

Loyalty cards can start with a prefix if this is useful to ERP software to recognize the code as a loyalty card (%%, ++).

For printing you can use the format code128
